

CO₂ Capture Project

Phase 1
Overview

*Iain Wright
CO₂ Project Manager
BP International*

www.co2captureproject.org

1st Regional Symposium on Carbon Management
Dhahran, Saudi Arabia, May 22nd 2006

CO₂ Capture Project

Project Timeline

- **Phase 1: 2001-2004**
 - Identification/selection/initial development
- **Phase 2: 2005-2008**
 - develop and refine technology performance
- **Phase 3: 2009-2012**
 - Demonstration(s)/Pilot(s)

CO₂ Capture Project

CO₂ Capture Project - Objectives

- Achieve major reductions in cost of CO₂ capture & storage:
 - 50% reduction when applied to a retrofit application.
 - 75% reduction when applied to a new build application.
- Demonstrate to external stakeholders that CO₂ storage is safe, measurable, and verifiable.
- Progress technologies to:
 - 'Proof of concept' stage by 2003/4
(Commercialization post 2010).

Page 4

CO₂ Capture Project

Program Funding

- International public-private collaboration
- Regional programs
- Sharing among programs to leverage results, reduce duplication
- \$25m Funding
- \$50m Project Cost

Industry
Eight Participants: 57%

Europe
EU: 12%

Norway
Klimatek: 12%

United States
DOE: 19%

CO₂ Capture Project

What Did We Learn: Technology

Capture

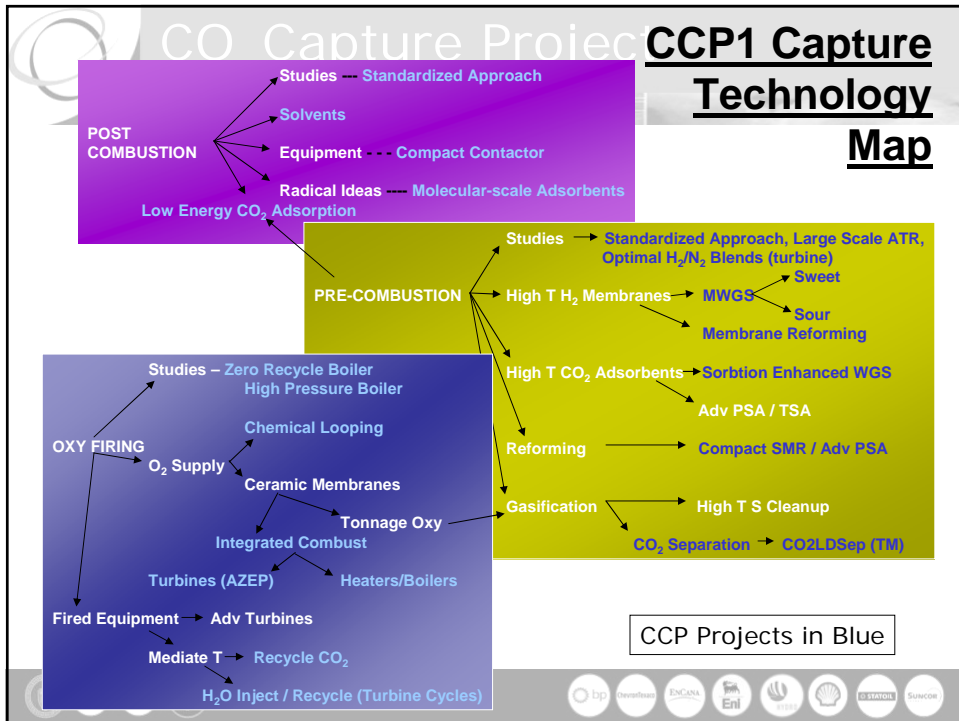

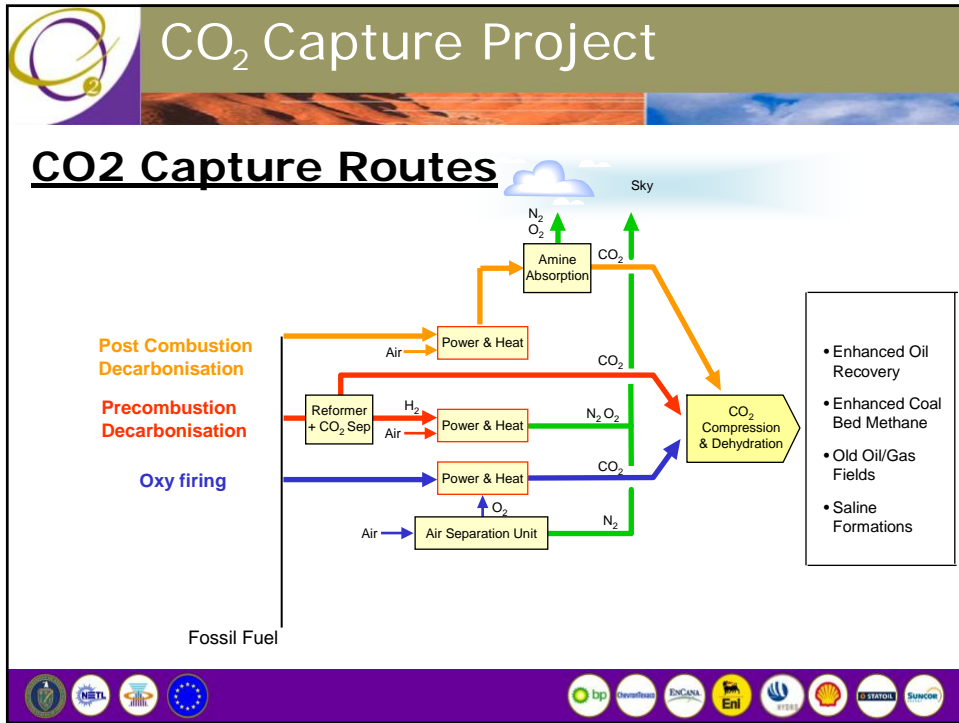

- Made significant headway in developing technology, resulting in step reduction in costs and importantly, ruled out some technologies

Storage

- Identified a comprehensive suite of questions we must address, to understand and demonstrate long term secure storage. Pioneered the risk-based approach for site identification, operation and monitoring

CO₂ Capture Project

CCP1 Capture Scenarios

Scenario		CO ₂ -generating fuel	Uncontrolled CO ₂ -emission
UK Refinery	Heaters & Boilers in existing refinery	Refinery fuel oil and gas	2,6 mill.ton/yr from target H&B's
Alaska Turbines	Small powergen turbines in operation	Natural gas	2,6 mill.ton/yr
Norway Gas Power	New 400 MW CCGT-plant	Natural gas	1,3 mill.ton/yr
Canada coke gasifier	New IGCC-plant	Petroleum coke	4,9 mill.ton/yr

Page 11

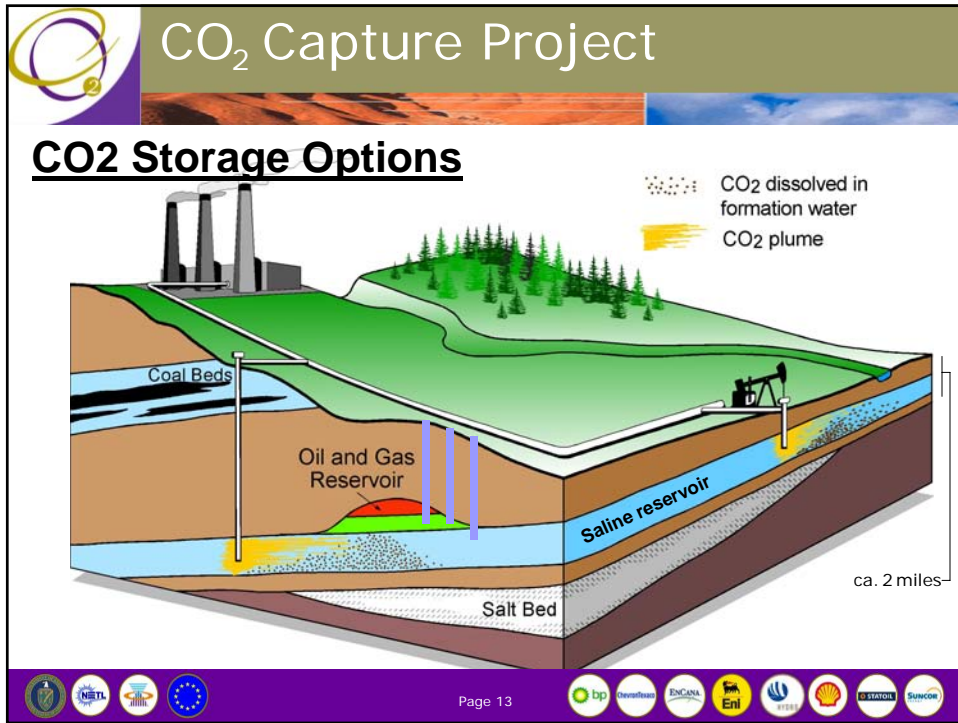

CO₂ Capture Project

Capture: CO₂ Avoided Cost Reductions*

* +/- 30% cost estimates, min reduction & maximum reduction data points shown.

Process	Minimum Reduction	Maximum Reduction
Oxyfuel	29%	38%
Post Combustion	23%	55%
Pre Combustion	14%	60%

Page 12

- # CO₂ Capture Project
- ## Storage: Technologies Delivered
- Developed a **comprehensive understanding of the HSE risks** of, and the requirements for, secure geological storage
 - Geological formations more likely to be secure than man-made wells
 - Depleted oil & gas fields generally be more secure than saline formations
 - Assembled a **large database of knowledge**, which will allow the risks associated with geological storage to be quantified and compared to other activities
 - Developed an extensive repertoire of **monitoring options**, applicable to a broad range of settings
 - Potential **leakage scenarios** have been mapped and matched to remediation actions
- Page 14

CO₂ Capture Project

Other Program Areas

- **Technology Advisory Board** – provided an unbiased review of project technology and progress
- **Policy and Incentives** - conducted review of current policy matters and identified opportunities and barriers for technology development and application
- **Communications** – communications strategy and engagement of NGO's from an early stage.
 - Website, Video & Brochure available from CCP
 - Peer review of results for UN PCC SRCCS
 - Two volume book published by Elsevier.

Page 15

CO₂ Capture Project

CO₂ cost chain

Power & Industrial processes with CO₂ capture and conditioning

CO₂ export terminal and pipeline infrastructure

Injection for Geological storage in producing or depleted oil and gas fields & aquifers

Cost \$3 – 100/t → \$1 - 25/t* → \$2 - 5/t* = \$6 – 130/t**

* Cost is distance dependant

*long term monitoring costs to be determined

** These numbers are indicative only

Page 16

CO₂ Capture Project

CCP Phase 1: Conclusions

- Industry & governments collaborated on an international scale, to provide strong leadership on technology development
- Developed a portfolio of technologies that now represent state-of-the-art, with broad application
- Technology R&D can produce step reductions in cost
- CO₂ sequestration must be proactively managed to reduce risks and ensure broad acceptance
- Communication and wide publication of results
- CCP2 has been launched and will build on the success of CCP
